

Thematic Session Proposal: Higher-order Finite Volume methods

Organizers:

Xesús Nogueira, Ignasi Colominas

Group of Numerical Methods in Engineering

Department of Mathematical Methods

Universidade da Coruña

DESCRIPTION

This session will present papers related to development of higher order (>2) Finite Volume methods. Application of these numerical schemes to solve sets of equations such as Navier-Stokes, Euler, Linearized Euler and MHD equations are welcome. Research work related with shock detection are also welcome.
