

Topology optimization

Proponentes: Helder Rodrigues (hcr@tecnico.ulisboa.pt) e Jose Guedes (jmguedes@tecnico.ulisboa.pt)

In this thematic session we seek papers in topology optimization. We would like to encourage the submission of papers covering either traditional topology optimization of structures as well as new methods and applications on different fields, namely on multi-physics and multi-scale problems. We expect to attract papers and communications on recent results on different fields of topology optimization, and as a consequence to create a fruitful environment for discussion of the present results, the enhancements and the developments of this field as well as the trends for future research.
